

# The "Intelligent" portion of ITS requires **Communication** ... we've got that covered.

Solar Technology's innovative solutions allow you to talk to any board, anytime, from anywhere. Including boards from different manufacturers.

## **SIMPLEST SOLUTION:**

Both SolarTech Message Boards and Arrow Boards now come with an integrated GPS receiver, a cellular transceiver and **FREE lifetime cellular service**. Then use SolarTech's free Command Center software to locate boards, change messages remotely and record what was on which board and when. Protection for you, your workers and the public.

## **SOLUTIONS FOR A MIXED FLEET:**

Have boards from different manufacturers? Add SolarComm Universal modems, then talk to any NTCIP-compatible boards through a secure private network. SolarTech has options for secure data transmission (utilizing VPNs, APNs, encryption, etc.). Tell us your setup, and we'll offer a communication solution to our boards or others... safer than public IP addressed modems.

## **TWO CHOICES:**

Both offering real-time data and seamless communication. Easy to implement and use.

## **ONE COMPANY:**

**Solar Technology.** Putting the "**Smart**" in Smart Work Zones

**A Better Board.**
