Connect and Talk to NTCIP Boards from any Manufacturer

Here's a product designed to make your life easier. SolarComm Universal lets you talk to any NTCIP-compatible message boards - regardless of manufacturer - and see their location and change messages from your office using our Command Center software.
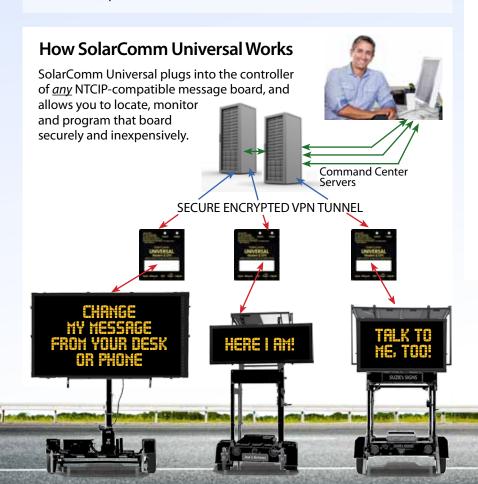

Its a modem and GPS package with free communications software, and you can choose to rent or own the hardware:

> No need to buy, install and maintain modems
> No reason to manage multiple manufacturers' control software
> No longer waste time traveling to the work zone to change messages
> Never have boards shut down due to low battery voltage

It's simple, reliable communication to all your NTCIP-compatible boards - all makes and models from <u>any</u> manufacturer.

SolarComm Universal is the conduit through which you can communicate with any NTCIP device, regardless of who manufactured it. And, because the communication is on a private network, it's more secure than public IP addressed modems.

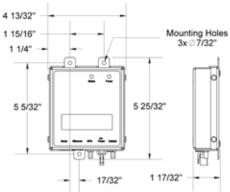

Technical Specifications

SOLARCOMM UNIVERSAL INCLUDES:
Ethernet Cable
Serial Cable
Power wire
Combo Cell/GPS Antenna (roof mount)

Interfaces:
Ethernet and RS 232 Serial
Power:
Input Voltage 9 - 24 VDC
